Who We Are

VNICESTONES was established with a commitment to bring the beauty of natural stone into modern architectural and interior projects. Our company specializes in marble mosaics, pebble mosaics, dimensional stone, wall cladding, pool surfaces, and other handcrafted natural stone applications.

Although the company is newly established, our team brings practical experience in the natural stone and mosaic industry dating back to 2007, particularly in quality control, material selection, and production processes. This long-standing industry experience allows us to understand the technical requirements of architects, contractors, designers, and project owners, from surface consistency and color harmony to installation efficiency and finishing quality.

Our products are made from carefully selected natural materials, including marble, beach pebble, andesite, slate, sandstone, and other premium stone varieties. Each mosaic piece is processed and assembled with attention to detail to achieve balanced patterns, consistent thickness, and a refined artistic appearance. The use of mesh-backed assembly also helps simplify and accelerate installation on site.

Based in Bandung with production and warehouse facilities in Tulungagung, Indonesia, VNICESTONES is positioned to support both local and international projects. We offer flexible design solutions, including custom mosaic patterns tailored to specific architectural concepts and project requirements.

At VNICESTONES, we believe that flooring and wall surfaces are more than functional elements. They are an essential part of the character, atmosphere, and value of a space. Our goal is to deliver natural stone products that combine craftsmanship, durability, and timeless design for projects that demand both beauty and performance.

Why Us?

Built around consistency, flexibility, and real-world project requirements, our products are developed to support architectural projects from concept and customization through production, installation, and delivery coordination.

- Premium Natural Materials

We carefully select marble, beach pebble, andesite, slate, sandstone, and other natural stone materials to ensure aesthetic quality and long-lasting performance.

- Precision Handcrafted Production

Every mosaic piece is processed and assembled with attention to pattern alignment, color consistency, thickness control, and surface flatness, resulting in a refined and installation-ready product.

- Wide Range of Designs

We offer various motifs, textures, and color combinations that can complement minimalist, contemporary, classic, and custom architectural concepts.

- Custom Design Capability

Our team can develop bespoke mosaic patterns and compositions according to project drawings, interior concepts, or specific client requirements.

- Suitable for Wet and Outdoor Applications

Thanks to their low water absorption and durable stone composition, our products perform well in swimming pools, bathrooms, kitchens, terraces, facades, and other exterior environments.
